SUMMARY

Final-year Computer Science student focused on applied AI and machine learning. Passionate about building intelligent systems using deep learning and GEN AI to solve real-world problems. Seeking an AI/ML engineering role to develop scalable, impactful solutions. Strong in Python-based ecosystems including TensorFlow and Scikit-learn.

EDUCATION

Bachelor of Engineering in Computer Science & Engineering

November 2022 - June 2026

New L.J. Institute of Engineering & Technology, Ahmedabad

CGPA: 9.74/10

SKILLS

Python · Machine Learning Algorithms · Deep Learning · Neural Networks · XGBoost · TensorFlow · Scikit-learn · LangChain · Generative AI · Prompt Engineering · Gemini API · OpenAI API · Automated Email Alerts · Pandas · NumPy · Matplotlib · Seaborn · Feature Engineering · Exploratory Data Analysis · Data Cleaning · Streamlit · Git · GitHub · Jupyter Notebook · Google Colab

INTERNSHIP AND EXPERIENCE

AI Engineering Intern · IBM SkillsBuild (via CSRBOX)

July 2025

(github.com/Nitya-Mehta/AlertAid) · (alertaid.streamlit.app)

- Built AlertAid, an AI-powered safety tool that analyses hazard descriptions, generates incident reports, and routes responses by sending email alerts for high-risk cases, logging medium-risk cases, and providing on-screen guidance for low-risk scenarios. Deployed as a live web app.

Machine Learning Intern · Prodigy Infotech

April 2025

- Completed 4 machine learning projects: house price prediction (Linear Regression) · customer behavioural segmentation (K-Means Clustering, 200 customers) · cat vs. dog image classifier (CNN, 37,500 images, 78.7% accuracy on unseen data) · hand gesture recognition (CNN, augmentation, cross-validation). All documented and open-sourced on GitHub.

PROJECTS

F1 Race Outcome Predictor

(github.com/Nitya-Mehta/Formula1-Predcition-Model) · (formula1-predcition-model.streamlit.app)

- Stacking ensemble trained on 6 years of F1 data, predicted finishing positions with an average error of under half a position, explaining 66% of race outcome variance. Deployed as a live interactive web app.

Production Logging System

(github.com/Nitya-Mehta/mesh-log)

- Built a real-time production logging system with Google authentication and automated shift classification, storing structured data directly in Google Sheets using Apps Script.

CERTIFICAIONS

- Python for Machine Learning & Data Science Masterclass** – Udemy
- Machine Learning Specialization** – DeepLearning.AI & Stanford University
- Complete Generative AI Course With Langchain and Huggingface** – Udemy

ACHIEVEMENTS

Head of Content Writing & Editing - Published and Distributed over 350 copies of the college's official magazine

Head Coordinator, Esports Events - Organised Valorant tournaments for 100+ participants
