SUMMARY

Computer Science graduate with hands-on experience building and deploying AI/ML systems across three internships. Strong in Python-based ML, generative AI APIs, and full-stack backend development with Django and PostgreSQL. Expanding into cloud infrastructure and DSA.

EDUCATION

B.E. Computer Science & Engineering

2022 - 2026

New L.J. Institute of Engineering & Technology, Ahmedabad

CGPA: 9.78 / 10

SKILLS

ML & AI: Python · TensorFlow · Scikit-learn · XGBoost · CNN · RNN · NLP · OpenCV · Feature Engineering · EDA

Generative AI: LangChain · Gemini API · OpenAI API · Hugging Face · Prompt Engineering

Backend & Data: Django · PostgreSQL · Razorpay · Pandas · NumPy · Matplotlib · Seaborn

Tools: Streamlit · Vercel · Git · GitHub · Jupyter · Google Colab

EXPERIENCE

Web Development Intern · Aavishkar Codex Infotech

Jan 2026 – Apr 2026

- Built Smart Parking System — full-stack Django 5 app with ANPR plate scanning (OpenCV + RapidOCR), Razorpay subscription flow, PostgreSQL in production, deployed live on Vercel.

AI Engineering Intern · IBM SkillsBuild (via CSRBOX)

Jul 2025 · 1 month

- Built AlertAid — an AI safety tool using the Gemini Flash API that classifies workplace hazards, auto-generates incident reports, and routes responses via SMTP email alerts. Deployed live on Streamlit.

Machine Learning Intern · Prodigy Infotech

Mar 2025 – Apr 2025

- 4 end-to-end ML projects: house price prediction, customer segmentation (K-Means, 200 customers), CNN image classifier (37,500 images, 78.7% accuracy), and hand gesture recognition with augmentation.

PROJECTS

F1 Race Outcome Predictor [Live](#) [GitHub](#)

- Stacking ensemble on 6 years of F1 data, predicting finishing positions with an average error under 0.5 positions ($R^2 = 0.66$). Live Streamlit app.
- Stack:** Python · XGBoost · Pandas · Scikit-learn · Streamlit

Smart Parking System [Live](#) [GitHub](#)

- Full-stack parking management with slot booking, ANPR vehicle plate scanning, Razorpay payments, complaint tracking, and admin dashboards. PostgreSQL in production.
- Stack:** Django · PostgreSQL · OpenCV · RapidOCR · Razorpay · Vercel

AlertAid — Workplace Hazard Reporter [Live](#) [GitHub](#)

- Classifies hazard descriptions, generates incident reports, and routes responses via email/logs/on-screen based on risk level. Built at IBM internship.
- Stack:** Python · Gemini API · SMTP · Streamlit

MNIST Neural Network from Scratch [GitHub](#)

- 2-layer neural network built entirely in NumPy — no TensorFlow or Keras. Implemented forward propagation, backpropagation, and gradient descent by hand.

Production Logging System [GitHub](#)

- Real-time shift logger with Google Auth, automated shift classification, and data piped into Google Sheets via Apps Script. Built for an active factory floor.

CERTIFICATIONS

- Machine Learning Specialisation — *DeepLearning.AI & Stanford University* · Coursera
- Complete Generative AI Course with LangChain and HuggingFace — *Udemy*
- Python for Machine Learning & Data Science Masterclass — *Udemy*

ACHIEVEMENTS

Head of Content Writing & Editing Team · Head Coordinator, Esports Events
